

**NOTICE TO PROPERTY OWNERS OF PUBLIC HEARING ON PROPOSED INCREASE IN SEWER SERVICE CHARGES
EFFECTIVE JULY 1, 2017**

Fairfield-Suisun Sewer District (District) provides wastewater collection, treatment, and disposal services to the cities of Fairfield and Suisun City. The District maintains a wastewater treatment plant that process approximately 15 million gallons per day; 13 wastewater pump stations; and 70 miles of sewer pipes and other related facilities such as manholes. More information about the District is available on District website at www.fssd.com

Current and proposed charges for the Customer Classes are shown below. The District's monthly rate is the lowest in all of Solano County and other neighboring agencies. The rate increase is due to increasing regulatory and operating costs and ensures adequate funds for maintenance and replacement of aging infrastructure. The proposed increase was a result of the most recent sewer rate study.
