NOTICE OF CONSTRUCTION

ISSUED ON MAY 29, 2025

This is a notice of construction for work to be performed in your neighborhood for the following project:

FAIRFIELD-SUISUN SEWER DISTRICT CONSTRUCTION OF KELLOGG RESILIENCY PROJECT

Planned Starting Date of On-Site Work: June 2025
Anticipated Completion of On-Site Work: December 2025

The Fairfield-Suisun Sewer District (District) serving as the Lead Agency for the City of Suisun City (City) has contracted with Carone & Company, Inc. to perform construction of the Kellogg Resiliency Project (Project). This Project is a collaborative initiative between the District and the City focused on reducing flood risk, enhancing water quality and mitigating wildfire-related hazards within the Kellogg Stormwater Basin and in the surrounding community.

The Project involves construction within the Kellogg Stormwater Basin (Basin) consisting of removal of non-native vegetation, rehabilitation of Kellogg Pump Station mechanical equipment, construction of a new fire access road along the south end of the Basin, new fencing around the perimeter of the Basin, drainage improvements, landscaping and irrigation systems. Other improvements planned as part of the project include new storm drain infrastructure, Green Stormwater Infrastructure (GSI), sidewalk, curb and gutter, ADA pedestrian curb ramps, driveway replacements where impacted, and asphalt concrete paving along School Street and Kellogg Street, from the southern roadway terminus to Elwood Street.

The work will be performed with the intent of minimizing disruptions to nearby residents and travelers but will involve temporary traffic and parking restrictions, primarily along the southern end of School Street and Kellogg Street. The District's construction contractor will provide temporary traffic control devices to safely route pedestrians, bicyclists, and motor vehicles around the active work areas as necessary. On-street parking will be temporarily restricted at selected locations during construction; "No Parking" signs will be posted along the street three (3) days in advance of the planned construction work. Residents impacted by the construction work will also be provided with a separate notice a minimum of three (3) days prior to the start of work, containing information on the contractor's work activities and planned work durations which may temporarily impact traffic and available on-street parking in the area.

For work involving driveway reconstruction, the District's project team will separately engage affected property owners on an individual basis to provide additional coordination and information in advance of the work.

Hours of construction will be 7:30 a.m. to 4:30 p.m., Monday – Friday

Please see the following page for information on how to access the District's project website, and for contacting the District Project Manager assigned to the project.

FOR MORE INFORMATION:

Refer to the District website: <https://www.fairfieldsuisunsewer.ca.gov/public-outreach/kellogg-resiliency-project/>

The District's website will be periodically updated to provide residents and the public with information on the general progress of construction, and will also include details on future construction activities along School Street and Kellogg Street that may temporarily impact traffic and on-street parking.

FAIRFIELD-SUISUN SEWER DISTRICT:

Ian Bronswick, PE, Project Manager, 707-428-9107, ibronswick@FairfieldSuisunSewer.ca.gov
